Molecular Mechanism of Congenital Heart Disease and Pulmonary Hypertension Toshio Nakanishi, H. Scott Baldwin, Jeffrey R. Fineman, Hiroyuki Yamagishi, 2020-02-28 This open access book focuses on the molecular mechanism of congenital heart disease and pulmonary hypertension, offering new insights into the development of pulmonary circulation and the ductus arteriosus. It describes in detail the molecular mechanisms involved in the development and morphogenesis of the heart, lungs and ductus arteriosus, covering a range of topics such as gene functions, growth factors, transcription factors and cellular interactions, as well as stem cell engineering technologies. The book also presents recent advances in our understanding of the molecular mechanism of lung development, pulmonary hypertension and molecular regulation of the ductus arteriosus. As such, it is an ideal resource for physicians, scientists and investigators interested in the latest findings on the origins of congenital heart disease and potential future therapies involving pulmonary circulation/hypertension and the ductus arteriosus.

Spectrophotometry & Spectrofluorimetry D. A. Harris, C. L. Bashford, David A. Harris, 1987 Using this book biochemists can determine how spectrophotometry can contribute to laboratory analyses. The Ghrelin System A. Benso, F.F. Casanueva, E. Ghigo, R. Granata, 2013-04-22 The ghrelin story started more than 30 years ago with the discovery of synthetic GH secretagogues. Only in 1999 was ghrelin a natural GH-releasing peptide, discovered. Ghrelin, however, is much more than simply a natural GH secretagogue. In fact, this hormone is one of the most important factors known for regulating appetite and energy expenditure. Furthermore, ghrelin is the trigger for other neuroendocrine, metabolic and nonendocrine actions. This book, written by researchers who provided the major contributions to our current knowledge of this complex system, gives a comprehensive overview of the recent advances in ghrelin research. The hormone's influence on the cardiovascular, metabolic and gastroenteropancreatic system, hypothalamus-pituitary-adrenal axis, prolactin secretion, thyroid axis, gonadal axis as well as on behavior is discussed in detail. Furthermore, the clinical perspectives for ghrelin-derived therapeutic products are presented. Illustrating the tight inter-relationship between endocrinology, metabolism, cardiovascular disease and internal medicine, this book is essential reading for all scientists

interested in appetite control, body weight and energy expenditure, as well as diabetes mellitus and neuroendocrinology.

Muscle Disease Hans H. Goebel, Caroline A. Sewry, Roy O. Weller, 2013-05-29 This book clarifies the pathology and genetics of muscle disease for pathologists, clinicians, geneticists and researchers to aid in the diagnosis and management of patients. Organized around the 'motor unit' concept, this book presents the latest understanding of muscle disease, and how this can help identify new treatments.

Public Health and Infectious Diseases Jeffrey Griffiths, James H. Maguire, Kristian Heggenhougen, Stella R. Quah, 2010-03-09 Emerging infectious diseases may be defined as diseases being caused by pathogens only recently recognized to exist. This group of diseases is important globally, and the experience of the last 30 years suggests that new emerging diseases are likely to bedevil us. As the global climate changes, so changes the environment, which can support not only the pathogens, but also their vectors of transmission. This expands the exposure and effects of infectious disease and, therefore, the importance of widespread understanding of the relationship between public health and infectious disease. This work brings together chapters that explain reasons for the emergence of these infectious diseases. These include the ecological context of human interactions with other humans, with animals that may host human pathogens, and with a changing agricultural and industrial environment, increasing resistance to antimicrobials, the ubiquity of global travel, and international commerce. * Features the latest discoveries related to influenza with a newly published article by Davidson Hamer and Jean van Seventer * Provides a listing of rare diseases that have become resurgent or spread their geographic distribution and are re-emergent * Highlights dengue and malaria, as well as agents such as West Nile and other arboviruses that have spread to new continents causing widespread concerns * Includes discussions of climate influencing the spread of infectious disease and political and societal aspects

Retinal Degenerations Matthew M. LaVail, Joe G. Hollyfield, Robert E. Anderson, 2012-12-06 The topics in this volume explore the etiology, cellular mechanisms, epidemiology, genetics, models and potential therapeutic measures for the blinding diseases of retinitis pigmentosa and age-related macular degeneration. Special focus is highlighted in the areas of Mechanisms of Photoreceptor Degeneration and Cell Death (extremely important because very little is known how or why photoreceptors die in these diseases, despite an abundance of genetic information), Age-Related Macular Degeneration (with

several novel approaches to its analysis), Usher Syndrome (the most severe form of retinitis pigmentosa, which includes an early or congenital loss of hearing along with blindness), and Gene Therapy. In addition, the section on Basic Science Related to Retinal Degeneration is particularly strong with several laboratories reporting on new discoveries in the area of outer segment phagocytosis, a key component of photoreceptor-retinal pigment epithelial cell interactions in normal and degenerating retinas.
